

THE NEXT GENERATION  
IN TOOTH REPLACEMENT

# ORAL HEALTH IS KEY TO YOUR OVERALL HEALTH

## **World Health Organization (WHO) Global oral health action plan:**

“Oral health is a key indicator of overall health, well-being and quality of life.

The pain and discomfort associated with oral diseases make life difficult and can lead to social isolation.

**Left untreated, the health-related impact of oral diseases can be severe.”**

Global oral health plan 2023-2030

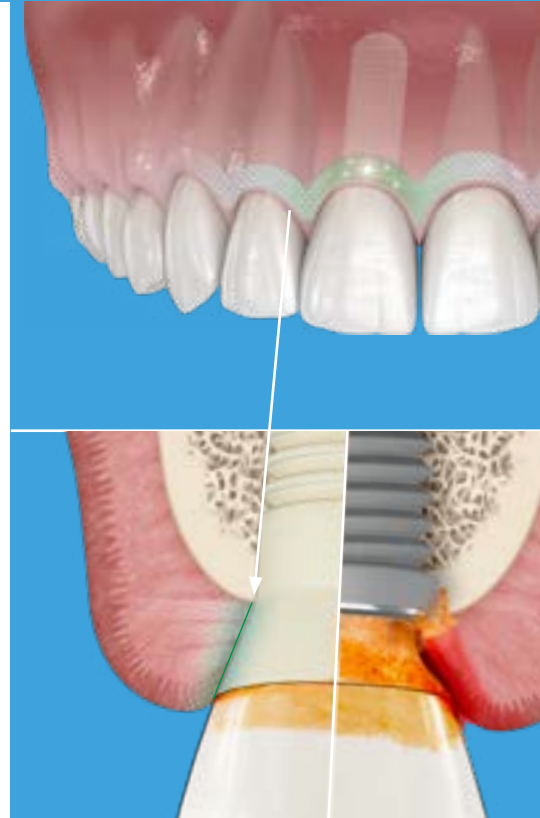

# A ROBUST DEFENSE BARRIER IS THE BASIS FOR LASTING ORAL HEALTH

**Natural teeth and the surrounding gums form a strong connection, creating a defense barrier that contributes greatly to oral health.**

Without this defense barrier, plaque and bacteria can easily penetrate deep into the tissues and cause inflammation of both the gums and the bone.

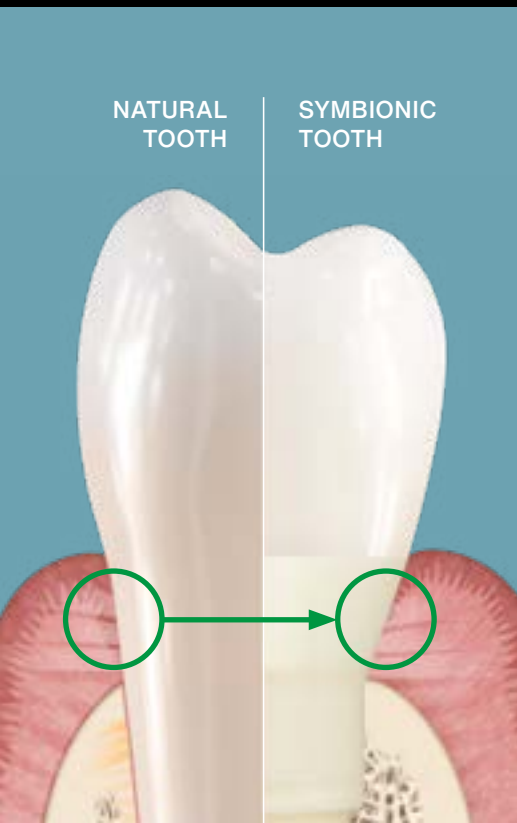

**When a tooth is lost, its defense barrier is destroyed – and no dental implant available today is capable of restoring it.**

The consequences can be severe: painful infections and, in many cases, the loss of the implant.

# PATENT™ SYMBIONIC TEETH

## INSPIRED BY NATURE

### Patent™ Symbiotic Teeth are different.

In long-term clinical studies, **Patent™ Symbiotic Teeth** have delivered treatment results **superior** to dental implants. They interact with the gums in a way that is similar to natural teeth!

**Unlike existing dental implants, Patent™ Symbiotic Teeth can restore the protective function of a natural tooth's defense barrier.**

For over 20 years, Patent™ Symbiotic Teeth have proven to be the only tooth replacement solution to reliably protect patients from inflammations and infections of the gums and the bone.

# THE NEXT GENERATION IN TOOTH REPLACEMENT

## DESIGNED FOR PERMANENT DENTAL HEALTH

### Patent™ Symbiotic Teeth are the next generation in tooth replacement.

They are the safest choice for every patient – including those with higher oral health risks (such as smokers, people with specific medication needs, or those with complex medical histories) who might otherwise be excluded from treatment.

### Optimal Esthetics – Lasting a Lifetime

Patent™ Symbiotic Teeth enable permanent tissue health, which is the foundation for optimal esthetics that last a lifetime.

**You deserve the best – so make sure that you choose Patent™ Symbiotic Teeth.**

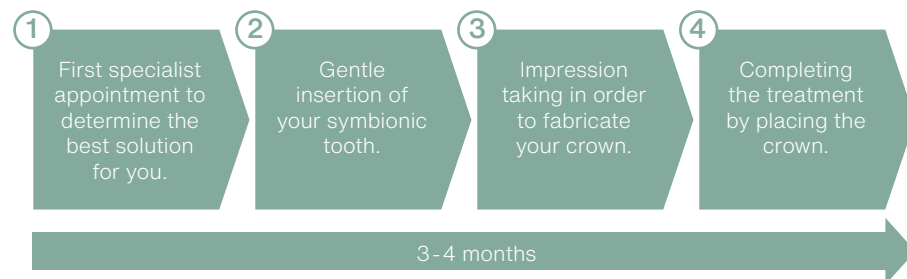

## PERFECT TOOTH REPLACEMENT TAKES TIME FOUR STEPS BACK TO WELL-BEING

Excellent long-term oral health cannot be rushed.  
Nature needs time.

When individual physiological conditions are not optimal, the focus is first on creating an ideal foundation for placing Patent™ Symbiotic Teeth, rather than taking shortcuts that lead to inferior results.

Between the second and third appointment, after 8-12 weeks, your Patent™ Symbiotic Tooth will have integrated into your bone and gums. Until then, a provisional crown can be worn, providing esthetics.

## PATENT™ SYMBIONIC TEETH THE FIRST CHOICE FOR TOOTH REPLACEMENT

**German Z.** (Switzerland)

„With the new Symbiotic Tooth from Patent™, I can chew properly again, and my suffering is finally over“.

**Johannes L.** (Germany)

„Despite challenging anatomical conditions, the surgery was over quickly and there was no pain involved. Today, four years later, I am as happy as ever with my Symbiotic Tooth!“
